

Installation Instructions

For 3.3" Refrigeration Evaporator Fan Applications

WARNING!

To prevent electric shock, personal injury, or death, turn off the electric power at the disconnect or main service panel prior to making any electrical connections.

This motor is factory programmed for CCWLE rotation and a single speed of 1550 RPM.

- To change the speed (600-2000 RPM) or rotation, use the optional wireless programming kit (MARS No. 08505).
- To convert the motor to 2-speed operation for enhanced energy savings, use the optional wireless programming kit (MARS No. 08505) and the optional thermistor kit (MARS No. 08515).
